Hiring Manager
Blender Foundation

Dear Hiring Manager,

For the last 20 years, Blender has kept surprising me. Not only has Blender established itself as one of the leading tools in 3D modelling, it has done so as open-source software. The UI redesign in version 2.80 was a turning point: I still clearly remember how professional and approachable it made Blender feel. Since then, Blender has continued to surprise me with new capabilities and the same commitment to quality. You clearly stand out from the rest!

Reading your Senior Software Engineer vacancy brought that same sense of surprise. The port to HarmonyOS feels like a natural step after the upcoming Android version for 2027. My intuition is that bringing Blender to tablets and mobile devices will add new possibilities for pen and touch interaction will border the usability and applications of Blender.

Having spent my career in both deeply technical and business roles, I have developed strong technical intuition for building solutions, alongside a solid foundation in business administration.

My first professional experience at HP gave me a solid foundation in software development, version control, and the standards needed to keep production code reliable and maintainable. Since then, code has remained central to how I solve problems. More recently, I built web applications using 3D graphics to support my own venture, giving me the opportunity to learn the fundamentals of shading and ray tracing.

My PhD in Microelectronics strengthened my ability to translate complex mathematics into working code. I developed a circuit simulator using graph theory and linear algebra, gaining confidence in tackling mathematically demanding problems. Combined with my broad engineering experience, this gives me a strong foundation to learn unfamiliar parts of Blender's codebase and contribute across different areas of its development.

My last role in my own venture, La Calçotada, involved applying computer science principles to rethink food preparation, bringing a traditional Catalan food experience to around 10,000 people across northern Europe. Although I could not raise the funding needed to continue, building the business broadened my perspective beyond engineering, teaching me to understand customers, bring people together, and make difficult decisions with limited resources. I also became a self-taught chef with a scientific approach to cooking, comfortable preparing large feasts—a skill I would happily put to use for the Blender team.

Thank you for your time and consideration. I am available to work immediately and particularly eager to return to C/C++ development, tackle challenging technical problems, and contribute to a tool I have admired for years.

My work experiences, coupled with my affinity towards Linux and open-source values, would make me an asset to Blender's house and team! You can easily reach me at you convenience by email julidelos@gmail.com or by telephone +31 6 26 17 98 86

Sincerely,

Julià Delos Ayllón
